

Business Continuity & Disaster Recovery

A healthy and available network is essential to your company's ability to operate successfully. If your network goes down or important data is delayed, valuable productivity will be lost.

Your business must be prepared to recover as quickly as possible. Business Continuity and Disaster Recovery planning are processes that help organizations prepare for disruptive events. Today, disruptive events come in many forms including natural disasters, malicious attacks or simple human errors.

Due to the increasing complexity in IT systems, applications and communications infrastructure, today's business environments are extremely demanding. To protect against viruses, network and system outages and other threats, a comprehensive and strategic Business Continuity and Disaster Recovery plan should be a top priority.

Accelerated Network Solutions takes a systemic and thorough approach to information technology Business Continuity and Disaster Recovery planning. We take the time to understand your business as we recognize that no two organizations are alike. Our services take into account three important areas:

- Disaster Tolerance
- Disaster Avoidance
- Disaster Recovery

To deliver the value of Business Continuity and Disaster Recovery, Accelerated Networks offers planning, operational and testing services. Rather than simply prove that the plan works and meet the original objectives, we conduct additional testing to discover any potential weaknesses or unforeseen areas that would benefit from continuous improvement. We provide written evaluations, comprehensive plans and the services and resources to keep your business running, even in the face of unexpected events.

Contact Accelerated Networks today to learn more about our technical expertise, practical experience and world-class service that can help you keep your business running under any circumstance.

“We have used Accelerated Network Solutions several times over the last two years to augment our staff and provide expertise in Microsoft Exchange and other IT administration. Each time we have received prompt and knowledgeable assistance for the project and have been extremely satisfied.”
