

Professional Services & Systems Integration

Your technology, processes and IT needs are sure to evolve as your business grows.

Accelerated Network Solutions professional services team is your partner in tackling challenges ranging from networking and data migration to systems installation and integration. With many years of combined experience, Accelerated Networks will help you analyze your current environment and needs, identify the optimal solutions, and implement the required technology.

Accelerated Networks' array of Professional and Systems Integration Services includes:

- System & Database Design
- Data Migration
- On Site Training
- Middleware Design
- Business Process Automation
- Network Assessments & Security Auditing
- Equipment and Telecom Procurement Consulting
- Application Development & Integration
- Online Information Systems
- Technology Procurement Consulting
- Client/Server Application Development
- Specialized Support for Custom Applications and Internet Services

Project Management Process

An example of our Project Management Process is:

Needs Assessment

Accelerated Networks initiates professional services projects with a customized needs analysis. In this discovery phase, we will gather input from your team to evaluate the current environment and understand your specific requirements. At this point, we develop a detailed plan that recommends the best technology solution to achieve your goals. Within the project plan, systems integration and all other requirements are identified.

Implementation

Next, the implementation process begins. Pre-implementation meetings will define roles and set the timeline for the project. Your solutions manager will be the central point of contact throughout the remainder of the project.

Systems Integration

As part of the implementation process, Accelerated Networks will integrate the necessary disparate systems to create a complete solution that will help you achieve higher levels of productivity and efficiency.

Feedback and Testing

Throughout the implementation we gather and report detailed feedback to fine tune the solution. And post-implementation, full testing is conducted by the Accelerated Networks team to evaluate and measure the success. Testing follows our proven methodology to ensure data, hardware and user expectations are met.

Service Level Agreements

All projects are backed by service level guarantees that apply relevant metrics that ensure that performance targets are met.

Training and Support

Accelerated Networks offers customized training and ongoing support for its professional services.

Contact Accelerated Networks today to learn more about our technical expertise, practical experience and world-class service, that can help you create and implement highly effective IT solutions.

“We have used Accelerated Network Solutions several times over the last two years to augment our staff and provide expertise in Microsoft Exchange and other IT administration. Each time we have received prompt and knowledgeable assistance for the project and have been extremely satisfied.”
